PROGRAMMING STATS

- **Programming Language**

Objective-C (1100+ stars on [GitHub](#)), C# (40k LOC), Java (20k LOC), JavaScript, Swift, Ruby.

- **Familiar Framework & Skill**

iOS/macOS, Android, Unity, Vue.js, Ruby On Rails, git, Adobe Suite, Sketch

EDUCATION BACKGROUND

- **Carnegie Mellon University**

Master of Science in Mobile and IoT Engineering

Pittsburgh, U.S.

Starting Feb. 2021

- **Northeastern University**

Master of Science in Information Systems (Summer Semester)

Boston, U.S. (Remote)

Jul. 2020 – Aug. 2020

- **Central South University**

Bachelor of Engineering in Computer Science and Technology (conferred in June 2019)

Changsha, China

Sept. 2014 – Jun. 2018

- **Coursework:** Computer Graphics, Human-Computer Interaction, Algorithm Analysis and Design, Data Structure, Object-Oriented Programming, Java Language and System Design, Computer Network, Discrete Mathematics, etc
- **Honor:** Outstanding Collegiate Dissertation on Graduation Project (*GIS Planet System Design and Implementation using Unity Engine*)

PROFESSIONAL EXPERIENCE

- **rct studio**

Co-founder & Chief Engineer

Beijing & Los Angeles

Sept. 2018 - Jan. 2019

- **Research:** Studied possible solutions for serializable plot definition and management, semantic movie script language specification, and high-fidelity VR gameplays.
- **Development:** Led the development of the interactive VR movie demo in Unity and the pipeline for movie scripts based workflows, including a REPL that transforms movie scripts into our in-house definition format and generates corresponding scene graphs in 3D applications like Unity3D.
- **Collaboration:** Cooperated closely with other founders for the company to grow and raise funds. Projects were presented at the Y Combinator Demo Day (featured by TechCrunch).

- **Baidu**

Unity Developer Intern in Smart Hardware BU

Beijing, China

Mar. 2017 - Dec. 2017

- **Refactoring:** Rewrote the codebase of the smart speaker previously worked on at RavenTech (later acquired by Baidu) using Reactive Pattern (UniRx) for better readability and stability.
- **Maintenance:** Wrote internal CI/CD tools in Unity to automate documentation generation and build testing.

- **RavenTech**

Full-stack Software Engineer Intern in RavenLab

Beijing, China

Mar. 2016 - Sept. 2016

- **Prototyping:** Supported in various projects to validate internal ideas, including some iOS apps and a Unity GearVR product with custom built native plugins for native messaging and shared bitmap access, Leap Motion support with socket forwarding and a gaze based VR GUI system.
- **Development:** Took charge of the audio visualization module on the Raven H-1 smart speaker graphical frontend using FFT calculation in Android and full-screen shaders in Unity.

INDIE PORTFOLIO (FINGAMEWORKS)

- **Node Editor Framework**

Mar. 2019 - Jun. 2020

- **Research:** Designed and implemented a multi-purpose node editor GUI framework that can be used for visual scripting or storyline flow chart design.
- **Application:** Initially written in Objective-C as a barebone framework, the Swift port (Shader Editor) won Apple WWDC 20 scholarship. There is also a C# port (Game Logic Composer) using UIWidgets on Unity.

- **Live Wallpaper Series**

Dec. 2017 - May 2020

- **Research:** Studied the internal of Unity engine and exploited the player to function as a live wallpaper on Android, macOS and Windows platforms, respectively using `ApplicationContext`, `NSWindow`, and `User32` API hacks.
 - **Application:** UniLWP, production-ready Unity plugin on Asset Store and GitHub. Skyline, an Android live wallpaper that ranked the most paid app on Google Play (US region, Jan. 2018) and was covered by The Verge, LifeHacker, Android Authority, and TNW. Metropolis, a live wallpaper featured by XDA-Developers.
- **Unity Tooling** *Oct. 2016 - Mar. 2018*
- **Development:** Developed various tools to meet my own needs that Unity itself didn't provide. Worked out several solutions to integrate Unity instance into existing iOS projects for my out-sourcing clients, of which (1) involves Objective-C method swizzling and shell scripts to forward the implementation of `UIApplicationDelegate` from iOS side to Unity side, and (2) utilizes ruby scripts to modify the exported Unity Xcode project and turn it into a static framework or even a CocoaPod dependency.
- **Procedural Generation** *Aug. 2016 - Jul. 2018*
- **Research:** Investigated on procedural planet generation in the development stages of Epoch Core and my final year project (GIS System) in CSU. Ported parts of `libNoise` to cg language to have parallel noise generation on GPU, making the process of height-map generation 50 times faster than the CPU only based solution.
- **Indie Development & Open-source** *Oct. 2015 - Jan. 2019*
- **Indie Apps:** Published a handful of apps on both mobile and desktop platforms, including Product Hunt daily Top 4 GitHub Contributions(iOS) and Board For GitHub(macOS).
 - **Community:** Open-sourced some iOS UI components on GitHub to demonstrate how to achieve advanced UI and animation techniques (received 1100+ stars in total). Contributed (issue & pull request) to repos from Microsoft, Unity, JetBrains, and Mapbox.

CONFERENCES & SERVICES

- **Apple Worldwide Developers Conference** San Jose, U.S.
Scholar as 1/350 globally *Jun. 2018 & Jun. 2020*
- **Scholarship (2020):** Submitted a Swift Playground called Shader Node, an interactive shader playground with a drag-n-drop node editor interface, packed with sensor inputs as uniforms so that users can use iPads to write audio-reactive shaders. (`SpriteKit`, `UIKit Dynamics`, `Combine`, `SwiftUI`)
 - **Scholarship (2018):** Submitted a Swift Playground called Golf GO, a golf game written within 1000 lines but provides millions of maps at runtime using procedural algorithms (`SceneKit`, `GameplayKit`, `ModelIO`).
- **Wacom Connected Ink** Tokyo, Japan
Session Speaker *Nov. 2019*
- **Presentation:** Built a 3D modeling app called Air Ink with Wacom SDK and `ARKit`, which reached the final round of Inkathon. Presented technical key points on the Wacom Connected Ink event in Japan.
- **Apple Club of Central South University** Changsha, China
Member & Tutor *Sept. 2017 - Mar. 2018*
- **Volunteer:** Taught fellow students iOS development basics as a tutor. Covered Xcode usage, Objective-C, Foundation classes, MVC pattern, `UIKit`, and data persistence (`NSUserDefaults`) with a note app as an example.

HONORS & AWARDS

- **2nd Place for Microsoft Research Asia & Hunan University Hackathon** Changsha, China
- **1st Place for IKODE IKEA Hackathon** Shanghai, China
- **1st Place for SegmentFault & AngelHack Hackathon** Shenzhen, China
- **3rd Place for Uber API Hackathon** Beijing, China
- **2nd Place for China Academy of Art Hackathon** Hangzhou, China
- **1st Place for SegmentFault Hackathon** Beijing, China

OTHER INFORMATION

- **Digital Art:** Held a Dribbble player account with 16 shots and 200+ likes. Individually finished all icons, user interfaces, renders, promo videos and marketing materials of my own apps. Published some of my design work as free on Sketch App Sources.
